

## Research Laboratory Technician (RLT) Full-time, 9am-5pm (M-F)

Do you love performing laboratory tests? Are you curious about the science involved in designing new laboratory tests? We are searching for a research laboratory technician (RLT) to join Machaon Diagnostics for a unique opportunity. You will be working in a state-of-the-art clinical and research laboratory that is internationally recognized for its expertise in thrombosis and hemostasis. The position involves the performance of various test types, which may include immunology testing, photo optic/chromogenic/fluorescent testing, cellular assays, ELISAs, thrombin generation, molecular diagnostics, molecular sequencing and western blotting. Past experience in any of these techniques is a major plus.

Candidates with science degrees (master degree preferred) in immunology, chemistry, biochemistry, molecular and cell biology, or other life science AND 3+ years of post graduation experience in a research or clinical setting are welcome to apply. Past experience with GLP, GCP, CAPA, 21 CFR Part 58 compliance and other clinical study regulations is also a major plus.

This job is for the select few candidates that have a 'can do' attitude, are high-energy, uniquely detail-oriented and meticulous in record keeping. If you are keenly interested in advancing your scientific knowledge base and love performing laboratory tests, we invite you to apply.

Your duties will include work in the following areas:

- Immunology testing
- Platelet testing
- Molecular diagnostics
- ELISA (chromogenic/ fluorescent)
- ELISA design
- Thrombin generation testing
- DNA sequencing
- Test validation studies
- Clinical trial studies
- Assay development
- Western blotting
- Cytometry testing

Machaon Diagnostics RLT Job Posting

---

January 26, 2017

Please send your CV and a list references in PDF format when applying for this position.

Machaon Diagnostics is a 13, year old laboratory firm that is accredited by the College of American Pathologists (CAP), accredited by CLIA and licensed by the State of California. We are experts in hemostasis, thrombosis, immunology, special chemistry, platelet physiology/function, molecular diagnostics, and genetic assays.

The laboratory is located on a hospital campus in the sunny San Francisco East Bay, just 11 miles from downtown San Francisco.
